

## DATA SHEET

# MODEL TSW SINGLE WALL DAY TANK

Day Tanks are used as a temporary storage tank for fuel oil. Typically, they are found next to generators so that the generator will have fuel at hand to get started to establish emergency power. They are also used as part of the fuel system in boiler plants. Single wall day tanks are typically mounted inside some other containment method. All tanks are UL142. The tanks are supplied with all necessary ports and drop tubes along with necessary support equipment mounted on top.

DOUBLE WALL TANK  
SHOWN AS AN EXAMPLE

### Common Standard Equipment:

Carbon Steel, typically 10 gauge	One Emergency Vent Port
Painted Exterior	One Normal Vent Port
Tank Level Gauge Port (2")	Tank Return Port (2") with drop tube
